**Subject:** Re: AURA AGAR 2020 Sepsis Report

Dear Geoff

I trust you are well and surviving the nth Covid wave.

I have just been looking at the 2020 report and wonder if the group has considered what you mean by "sepsis". Sepsis now has an internationally agreed definition of "Life threatening organ dysfunction due to a dysregulated host response to infection". The use of sepsis in our reports appears to equate bacteraemia with sepsis? Is this correct or have I missed something?

Thanks

Simon
