Hello all

I am very pleased to announce that the NCAS/Guidance team have been successful in an MRFF Research Data Infrastructure grant to enhance the ability to automate the NAPS program using NLP and Machine Learning. We will also be working with general practice data (led by Jo-Anne Manski-Nankervis), and animal practice data (led by Glenn Browning) and will be working with the two leading digital health organisations (The Centre for Digital Transformation of Health, Uni Melb and RMIT) This brings enormous opportunities and new knowledge for our national surveillance plan I will be establishing a steering committee and would be delighted to have representation from this group There will be media releases going out from the partners, but wanted to give you all the heads up.
Cheers
Kas
